ES5 vs ES6

ACADE MIND

Taught in this course (from the beginning on)!

JavaScript Evolution

ES5 (and older)

Supported in basically all browser, including old IE

Only had `var`, not `let` or `const`

Generally same syntax as ES6, but quite some missing features

ES6 (and newer): Modern JavaScript

Supported in modern browsers, can (mostly) be transpiled to ES5

Many new features that help us write cleaner, better & faster code

Still under active development, but ES6 was a big step forward
